About Me

Hi! I'm Muhammad Al Faruq, a Graphic Designer with over 5 years of experience. Currently, I'm learning Full-Stack Web Development with a focus on Front-End Development, combining creativity and technical skills to build engaging, user-friendly web experiences.

Why I Choose This Project?

Photography equipment rental is a real business that often faces problems such as manual bookings, scheduling conflicts, and difficulty tracking equipment availability. I wanted to build a system that makes the booking process more efficient for both customers and administrators.

Tech Stack Overview

Laravel

Laravel is used because it provides a mature, secure, and productive backend structure for building REST APIs.

React

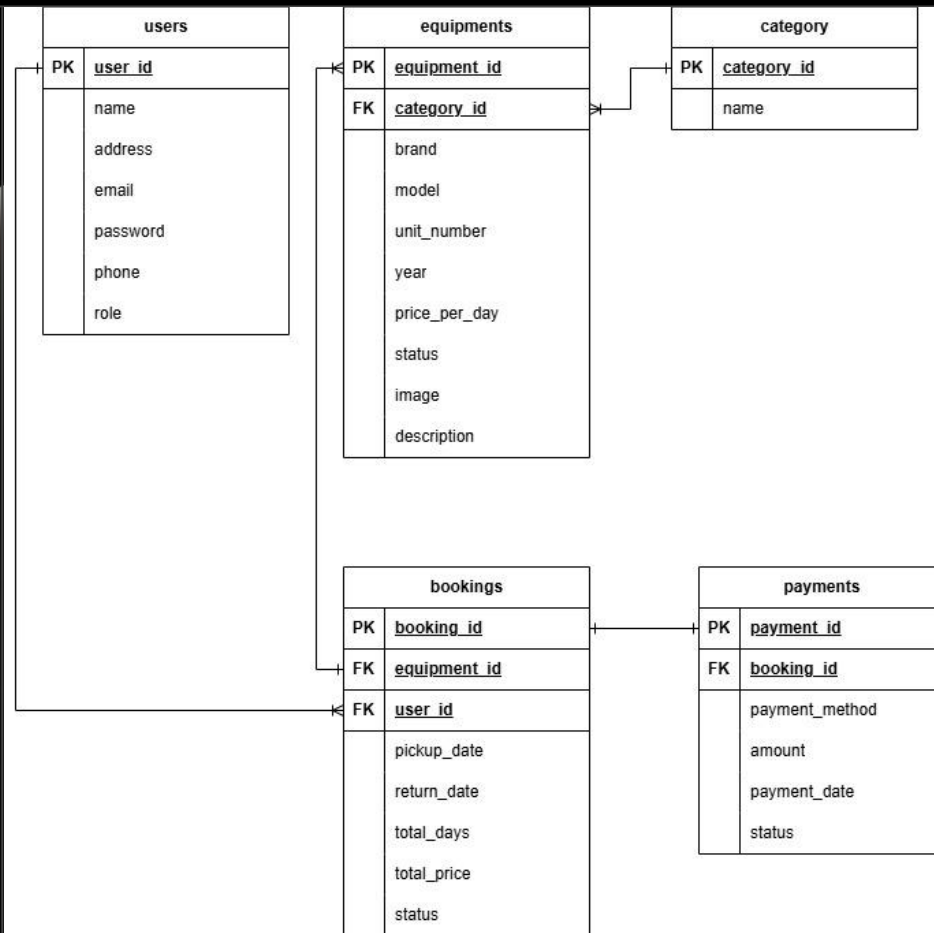

its component-based architecture, virtual DOM, and massive ecosystem make building complex, high-performance web applications much faster and easier than using traditional JavaScript

MySQL

MySQL is the world's most popular open-source relational database because it balances high speed, structural reliability, and cost-efficiency.

Entity Relationship Diagram (ERD)

REST API

Method	Endpoint	Description
POST	/register	Register new user
POST	/login	User authentication
GET	/equipments	Get all equipment
GET	/equipments/{id}	Get equipment details
POST	/bookings	Create a booking
GET	/bookings	Get user bookings
POST	/payments	Create a payment
GET	/payments	Get all payment

Authentication

Purpose

Verify the identity of users before accessing the system.

- User registration and login
- Laravel Sanctum for API authentication
- Access token generated after successful login
- Protected API routes using auth:sanctum

Authorization

Purpose Control what authenticated users are allowed to access.

- Role-based access (Admin & Customer)
- Admin can manage equipment, categories, and bookings.
- Customers can browse equipment and create bookings.

Thank you
